General information

Product:

Svan chair with armrest

Owner of the declaration:

Helland Møbler AS Contact person: Joakim Helland Phone: +47 958 09 013

e-mail: joakim.helland@helland.no

Program operator:

The Norwegian EPD Foundation Pb. 5250 Majorstuen, 0303 Oslo Phone: +47 23 08 80 00 e-mail: post@epd-norge.no Manufacturer:

Helland Møbler AS Postboks 10 6259 Stordal

Norway

Declaration number:

NEPD-4205-3430-EN

Place of production:

Helland Baltic ÖU

Hapvali, Nõmme küla, Haapsalu linn EE-90439 Läänemaa

Estonia

ECO Platform reference number:

Management system:

ISO 14001:2015, sertifikat nr 901085

This declaration is based on Product Category Rules:

CEN Standard EN 15804:2012+A1:2013 serves as core PCR NPCR 026:2018 Part B for furniture

Organisation no:

943 511 128

Statement of liability:

The owner of the declaration shall be liable for the underlying information and evidence. EPD Norway shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

Issue date: 30.12.2022

Valid to: 30.12.2027

Declared unit:

1 Pcs Svan chair with armrest

Year of study:

2021

Declared unit with option:

A1,A2,A3,A4

Comparability:

EPDs from programmes other than the Norwegian EPD Foundation may not be comparable

Functional unit:

Production of one chair provided and maintained for a period of 15 years.

Development and verification of EPD:

The declaration has been developed and verified using EPD tool lca.tools ver EPD2020.11, developed by LCA.no AS. The EPD tool is integrated into the company's environmental management system, and has been approved by EPD-Norway

General information on verification of EPD from EPD tools:

Independent verification of data, other environmental information and the declaration according to ISO 14025:2010, § 8.1.3 and § 8.1.4. Individual third party verification of each EPD is not required when the EPD tool is i) integrated into the company's environmental management system, ii) the procedures for use of the EPD tool are approved by EPDNorway, and iii) the process is reviewed annualy. See Appendix G of EPD-Norway's General Programme Instructions for further information on EPD tools.

Developer of EPD:

Oddrun Aunet Innselset

Reviewer of company-specific input data and EPD:

Pawel Sosinski

Verification of EPD tool:

Independent third party verification of the EPD tool, background data and test-EPD in accordance with EPDNorway's procedures and guidelines for verification and approval of EPD tools.

Approved:

Product

Market:

Europa and USA

Product description:

Svan is a very popular model, with its stylish design and solid construction. The ergonomically designed backrests give you good back support and comfortable sitting comfort. Pan is designed to be safe and easy to use and with the right height of the sitting surface. Key environmental indicators for variants on page 8

Product specification

- Distance between seat and back
- Slats in the back
- · With/without armrests
- Wooden base
- Removable seat
- Chermical disinfectant (acid-cured varnish)
- Extra seat height up to 5 cm

Technical data:

Width: 57cm Height: 85cm Depth: 54cm Sitting height: 46cm Armrest height: 66cm

LCA: Calculation rules

Declared unit:

1 Pcs Svan chair with armrest

Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

Allocation:

The allocation is made in accordance with the provisions of EN 15804. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

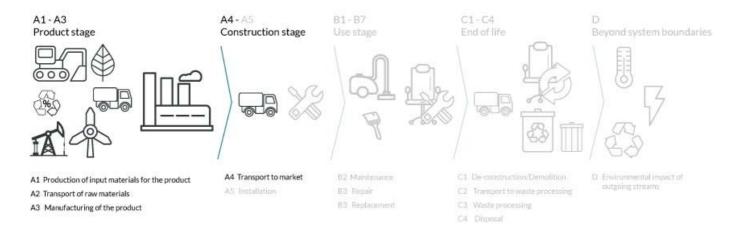

Data quality:

Specific data for the product composition are provided by the manufacturer. They represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on registered EPDs according to EN 15804, Ostfold Research databases, ecoinvent and other LCA databases. The data quality of the raw materials in A1 is presented in the table below.

| Materials | Source | Data quality | Year |
|------------------------------|---------------|--------------|------|
| Plastic - Polyurethane (PUR) | ecoinvent 3.4 | Database | 2015 |
| Metal - Steel | ecoinvent 3.3 | Database | 2016 |

| Plastic - Nylon (PA) | ecoinvent 3.6 | Database | 2019 |
| Textile - Polyester (PE) | ecoinvent 3.6 | Database | 2019 |

System boundary:

Additional technical information:

Transportation to an average customer in Copenhagen is 1000 km (A4: average European lorry > 32 tonnes)

The use stage (B1) is represented by a scenario and includes vacuum cleaning of textile once a month. The PCR does not provide detailed guidelines for what should be included in the use stage. In the end of life stage, the transport distance for waste to waste processing is 72 km (C1). The reuse, recovery and recycling stage is beyond the system boundaries (D). It is assumed that the solution is dismantled and the materials recycled or combusted according to general Norwegian treatment of industrial waste (see the table below). This calculation includes only CO2 emissions (GWP) in the C-modules. The transport distance to reuse, recovery or recycling varies for each material, but the average distance is 373 km. The vehicles used and associated data are described in detail in [5].

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

Transportation to an average customer in Copenhagen is 1000 km (A4: average European lorry > 32 tonnes) The use stage (B1) is represented by a scenario and includes vacuum cleaning of textile once a month. The PCR does not provide detailed guidelines for what should be included in the use stage. In the end of life stage, the transport distance for waste to waste processing is 72 km (C1). The reuse, recovery and recycling stage is beyond the system boundaries (D). It is assumed that the solution is dismantled and the materials recycled or combusted according to general Norwegian treatment of industrial waste (see the table below). This calculation includes only CO2 emissions (GWP) in the C-modules. The transport distance to reuse, recovery or recycling varies for each material, but the average distance is 373 km. The vehicles used and associated data are described in detail in [5].

CR Components for reuse; MR Materials for recycling; MER Materials for energy recovery; EEE Exported electric energy; ETE Exported thermal energy

Reading example: 9.0 E-03 = 9.0*10-3 = 0.009

*INA Indicator Not Assessed

Additional Norwegian requirements

Greenhouse gas emissions from the use of electricity in the manufacturing phase

National production mix from import, low voltage (production of transmission lines, in addition to direct emissions and losses in grid) of applied electricity for the manufacturing process (A3).

| Electricity mix | Data source | Amount | Unit |
|--|---------------|--------|---------------|
| Energy, electricity, European average: 1 kWh | ecoinvent 3.4 | 594,20 | g CO2-ekv/kWh |

Dangerous substances

The product contains no substances given by the REACH Candidate list or the Norwegian priority list.

Indoor environment

Our Furniture not contain any substances that affects indoor climate.

Additional environmental information

Key environmental indicators for variants for this EPD: Cradle to Gate analyse from A1 to A3

| Variant number | Global warming (kg CO2) | Total energy use (MJ) | Share of recycled material in product(%) |
|------------------------|----------------------------|-----------------------|--|
| Nell Chair without arm | 21,36 | 457,33 | 3,92 |
