Product

Product description:

Tulio 4-leg visitor chair with mesh backrest. The seat is upholstered with 100 % recycled polyester fabric.

Armrests and writing top available as options.

Tulio is a simple, yet well thought-out, visitor and meeting chair that's easy to customise to different needs and spaces. Due to the flexibility of its design and function, it's ideal for different types of meeting rooms and project spaces. This chair consists of only a few components, all of which can be easily replaced, which makes it circular and sustainable in the long term.

Product specification

Tulio is an extra sturdy chair for weights up to 130 kg, making it a safe choice for diverse users. It also has several ergonomic advantages with a flexing back, which provides natural movement and counteracts static sitting. The seat is curved, providing an ergonomically correct seating surface distributing the user's weight over a larger area. It also has a rounded front edge that provides comfortable support for the legs. The sloping armrests provide pleasant support to the arms and shoulders and fit easily under the tabletop.

This EPD Includes the following variants:

Tulio D-1057-RG - 4 legs, mesh back, upholstered seat with wool blend fabric,

Tulio D-1057-R51 - 4 legs, upholstered seat and back with 100 % recycled polyester fabric,

Tulio D-1059-RG - 4 legs, mesh back, upholstered seat with 100 % recycled polyester fabric, castors,

Tulio D-1058-FGS - C-frame, mesh back, upholstered seat with 100 % recycled polyester fabric.

Included options are:

Armrest D-A-TU,

Writing top D-T-TU.

Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

Allocation:

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Data quality:

Specific data for the product composition are provided by the manufacturer. They represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on registered EPDs according to EN 15804, Ostfold Research databases, ecoinvent and other LCA databases. The data quality of the raw materials in A1 is presented in the table below. Specific data for the manufacturing processes (product stage A3) refers to the year 2020. All other specific data is from year of study.

System boundary:

The upholstery is manufactured at Kinnarps' production site in Skillingaryd, where final assembly is also done. Certain steel components are manufactured at Kinnarps' production site in Jönköping and some are purchased as premanufactured components. The plastic components are purchased as premanufactured components.

The flow chart below illustrates the system boundaries of the analysis.

Additional technical information:

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

The product is shipped to the consumer in Kinnarps' trucks with blankets and cardboard sheets as packaging material which is returned to the factory after delivery and reused. This method saves 270 kg of packaging material per container and enables 50% more products to be transported in each truck. Kinnarps' trucks have a load efficiency of approximately 87 % and are run on diesel with renewable content. For more information about sustainability at Kinnarps, visit https://www.kinnarps.com/about-kinnarps/sustainability/.

The maintenance scenario includes vaccum cleaning of textiles once a week for the whole reference service life.

In normal use, no repair or replacement is required during the product's referenced service life.

^{1.} The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator

^{2.} This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

Note: 1 kg biogenic carbon is equivalent to 44/12 kg CO2

Additional requirements

Greenhouse gas emissions from the use of electricity in the manufacturing phase

National production mix from import, low voltage (production of transmission lines, in addition to direct emissions and losses in grid) of applied electricity for the manufacturing process (A3).

Electricity mix	Data source	Amount	Unit
Electricity, Sweden (kWh)	ecoinvent 3.6	54,94	g CO2-eg/kWh

Dangerous substances

The product contains substances given by the REACH Candidate list and the Norwegian priority list that are less than 0,1 % by weight.

Indoor environment

The product is low-emitting and tested and approved according to ANSI/BIFMA M7.1_2011.

GWP-IOBC: Global warming potential calculated according to the principle of instantaneous oxidation. In order to increase the transparency of biogenic carbon contribution to climate impact, the indicator GWP-IOBC is required as it declares climate impacts calculated according to the principle of instantaneous oxidation. GWP-IOBC is also referred to as GWP-GHG in context to Swedish public procurement legislation.
