## **Product**

### **Product description:**

The manufacturing of this functional and durable chair is part of Offecct's collaboration with the organisation ECONEF, who works towards developing a much needed orphanage in northern Tanzania, Africa.

"The chair Kali was designed with a somewhat low technical aspect to allow the future possibility of it being produced locally later on. The character of the chair is I think slightly educational without being boring I hope, and necessarily designed to have a long life", says Jasper Morrison.

A part of the revenue from each sold Kali will go directly to ECONEF orphanage in order to continue developing and improving the childrens environment.

### **Product specification**

The model studied in detail in this declaration is the OFFECCT Kali chair upholstered in Cura from Gabriel and white pigmented ash - including packaging). The key environmental indicators for the other models of the OFFECCT Kali chairs are presented on a table page 12 of this declaration.

### LCA: Calculation rules

## **Declared unit:**

1 pcs OFFECCT Kali chair

#### **Cut-off criteria:**

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

## Allocation:

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

### Data quality:

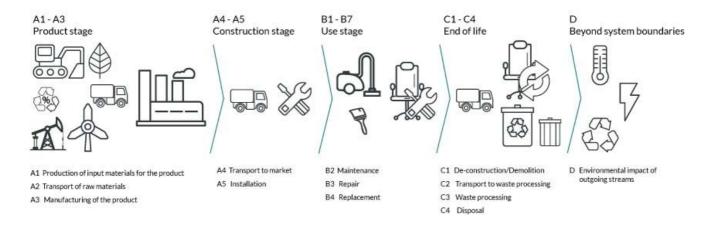

Specific data for the product composition are provided by the manufacturer. They represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on registered EPDs according to EN 15804, Ostfold Research databases, ecoinvent and other LCA databases. The data quality of the raw materials in A1 is presented in the table below.

<sup>1.</sup> The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator

<sup>2.</sup> This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

# **Additional requirements**

# Greenhouse gas emissions from the use of electricity in the manufacturing phase

National production mix from import, low voltage (production of transmission lines, in addition to direct emissions and losses in grid) of applied electricity for the manufacturing process (A3).

Electricity mix	Data source	Amount	Unit
Electricity, high voltage, hydro (kWh) - PL	ecoinvent 3.6	4,02	g CO2-eg/kWh

GWPIOBC	kg CO <sub>2</sub> -eq	0	0	9,62E-02	1,50E+00	2,36E-02	-3,39E-01

GWP-IOBC: Global warming potential calculated according to the principle of instantaneous oxidation. In order to increase the transparency of biogenic carbon contribution to climate impact, the indicator GWP-IOBC is required as it declares climate impacts calculated according to the principle of instantaneous oxidation. GWP-IOBC is also referred to as GWP-GHG in context to Swedish public procurement legislation.
