

# **Environmental Product Declaration**

# In accordance with ISO14025:2006 and EN15804:2012+A2:2019

# Splay Saddle

**Owner of the declaration:** SAMYOUNG M-TEK

Product name: Splay Saddle

**Declared unit:** 1kg Spaly Saddle

Product category /PCR: CEN Standard EN 15804:2012+A2:2019 serves as core PCR NPCR 013:2021 NPCR Part A: Construction products and services. Ver. 2.0. April 2021, EPD-Norge Part B for Steel and aluminium construction products **Program holder and publisher:** The Norwegian EPD foundation

**Declaration number:** NEPD-6531-5796-EN

**Registration number:** NEPD-6531-5796-EN

Issue date: 07.05.2024

Valid to: 07.05.2029

The Norwegian EPD Foundation

# General information

#### **Product:** Splay Saddle

#### Program operator:

The Norwegian EPD Foundation Post Box 5250 Majorstuen, 0303 Oslo, Norway Tlf: +47 23 08 80 00 e-mail: post@epd-norge.no

#### **Declaration number:** NEPD-6531-5796-EN

# This declaration is based on Product **Category Rules:**

CEN Standard EN 15804:2012+A2:2019 serves as core PCR NPCR 013:2021 Part B for Steel and aluminium construction products

### Statement of liability:

The owner of the declaration shall be liable for the underlying information and evidence. EPD Norway shall not be liable with respect to manufacturer, life cycle assessment data and evidences.

# **Declared unit:**

1kg of Spaly Saddle

Declared unit with option: A1, A2, A3, A4, C1, C2, C3, C4, D

Functional unit:

# Verification:

Independent verification of the declaration and data, according to ISO14025:2010

internal

external ■ Noh-hyun Lim Noh-hyun Lim Independent verifier approved by EPD Norway

### Owner of the declaration:

SAMYOUNG M-TEK Contact person: Phone: e-mail:

Yun Ki Kim +82-55-589-7162 kyk363@sym-tek.co.kr

### Manufacturer:

SAMYOUNG M-TEK 631-35, Samchil-ro, Chilseo-myeon, Haman-gun, Gyeongsangnam-do, Republic of Korea Phone: 055-589-7120 e-mail: kyk363@sym-tek.co.kr

### Place of production:

631-35, Samchil-ro, Chilseo-myeon, Haman-gun, Gyeongsangnam-do, Republic of Korea

#### Management system:

ISO 9001:2015, ISO 14001:2015, ISO 45001:2018

#### Organisation no: 608-81-27893

Issue date: 2024-05-07

Valid to: 2029-05-07

Year of study: 2023

# **Comparability:**

EPD of construction products may not be able to compare if they do not comply with EN 15804 and are seen in a building context.

The EPD has been worked out by: Peter Yeon

Approved

Manager of EPD Norway

# Product

### Product description:

A structure installed to minimize the stress on the main cable when dividing it into strands and anchoring it to the anchor block through the anchor. The Base Plate is seated on the Splay Saddle Foundation, and the main body is assembled to the Base Plate.

### Product specification:

Produced in Korea with iron

| Materials    | Value    | %      |
|--------------|----------|--------|
| Casting iron | 0.416 kg | 41.640 |
| Plate        | 0.584 kg | 58.360 |
| Accessory    | 0.001 kg | 0.001  |

#### Market:

Norway, Bridge construction

# Reference service life, product: 100 years

### Reference service life, building: Not Applicable

# LCA: Calculation rules

Declared unit:

1kg of Spaly Saddle

# Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

Also, the elements and activities excluded from the system boundaries were as follow:

A. Infrastructure, maintenance efforts for infrastructure (e.g., building and machinery)

B. Personnel lodging and transport, employee commute, administration

# Allocation:

The allocation is made in accordance with the provisions of EN 15804. And Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation.

A. Allocation is avoided, if possible, by dividing the unit process into two or more sub-processes and collecting LCI data for each sub-process.

B. Allocation is based on physical properties (e.g. mass, volume) when (i) there is a relevant underlying physical relationship between the products and co-products, and (ii) the difference in revenue per mass from the products and co-products is low.

C. In all other cases, allocation is based on economic values of the products and coproducts when they leave the unit process.

# Data quality:

Inventory data quality is judged by its precision (measured, calculated or estimated), completeness (e.g., unreported emissions), consistency (degree of uniformity of the methodology applied) and representativeness (geographical, temporal, and technological).

To cover these requirements and to ensure reliable results, site site specific data in combination with consistent generic data from the Ecoinvent v3.9.1 and Industry data 2.0 was used. The LCI datasets from the Ecoinvent v3.9.1 are widely distributed and used with the SimaPro Software

#### A1-A3 Product stage

The product stages include the raw material supply, raw material transport and product manufacturing.

#### A1- Raw material supply

The raw materials and packaging materials used to produce the Spaly Saddle were collected and calculated based on the annual production volume in 2023.

#### **A2-** Transport

The transport of raw materials and packaging is carried out by suppliers to the Spaly Saddle production site by various transport modes.

#### A3- Manufacturing of Spaly Saddle

All energy, industrial water, gas and environmental emission data are collected and calculated based on 2023 production year.

#### A4- Transport of Spaly Saddle

Transportation takes place between each of the life cycle stages. A4-Transport of Spaly Saddle includes transport from the Spaly Saddle production gate to the construction site.

#### B1-B7 Use stage

Module B1-B7 has been excluded according to the Product category rules NPCR 013 Part B for Steel and Aluminium Construction Products and NPCR PART A: Construction products and services.

#### **C1- De-installation / demolition**

This section provides information on the inputs and outputs of de-installation / demolition. Energy consumption of a de-installation / demolition process is on average 10kWh/m2 (Bozdag, Ö & Seçer, M. 2007).

The average mass of a reinforced concrete building is about 1000 kg/m2. Therefore, energy consumption during de-installation / demolition is 0.01 kWh/kg.

A conservative assumption has been made that the energy consumed during de-installation / demolition of a Spaly Saddle product is the same as that of a concrete building.

The source of energy is diesel fuel used by work machines. It is assumed that 100% of the waste is collected and transported to the waste treatment.

#### **C2-**Transport

Transportation distance and truck type from the construction site to the recycling site / final disposal(landfill) is assumed as 300 km and the Lorry, 7.5-16 metric ton, Euro VI..

#### **C3-** Waste processing

Approximately 85% of Spaly Saddle is assumed to be recycled based on World Steel Association, 2020.

#### **C4-** Disposal

It is assumed that the remaining 15 % of Spaly Saddle is taken to landfill for final disposal.

#### D Benefits and loads beyond the system boundary

Steel collected and recycled is assumed to replace a value of scrap (GLO).

# LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

PM: Particulate matter emissions; IRP: Ionising radiation, human health; ETP-fw: Ecotoxicity (freshwater); ETP-c: Human toxicity, cancer effects; HTP-nc: Human toxicity, non-cancer effects; SQP: Land use related impacts / soil quality

<sup>1</sup> This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

<sup>2</sup> The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator

# Information describing the biogenic carbon content at the factory gate

| Biogenic carbon content                               | Unit | Value    |
|---|------|----------|
| Biogenic carbon content in product                    | kg C | 0.00E+00 |
| Biogenic carbon content in the accompanying packaging | kg C | 0.00E+00 |

The product is exclusively made from steel. The origins of carbon contained in steel are not assessed.

# Additional requirements

# Location based electricity mix from the use of electricity in manufacturing

National production mix from import, low voltage (production of transmission lines, in addition to direct emissions and losses in grid) of applied electricity for the manufacturing prosess (foreground/core) per functional unit.

| National electricity grid        | Data<br>source     | Foreground /<br>core [kWh] | GWP <sub>total</sub><br>[kg CO2 -<br>eq/kWh] | SUM<br>[kg CO2 -<br>eq] |
|----------------------------------|--------------------|----------------------------|--|-------------------------|
| Electricity, medium voltage {KR} | ecoinvent<br>3.9.1 | 5.071E-01                  | 0.698  | 3.54E-01                |

# Guarantees of origin from the use of electricity in the manufacturing phase

Where guarantees of origin is applied in stead of national production mix – the electricity for the manufacturing prosess (A3) shall be stated clearly in the EPD per functional unit.

| Electricity source                                     | Foreground / core<br>[kWh] | GWP <sub>total</sub><br>[kg CO2 -eq/kWh] | SUM<br>[kgCO2 -eq] |  |
|--|----------------------------|--|--------------------|--|
| Guarantee of origin electricity used in the foreground | -                          | -  | -                  |  |
| Residual mix electricity used in the foreground        | -                          | -  | -                  |  |

### Additional environmental impact indicators required for construction products

In order to increase the transparency of biogenic carbon contribution to climate impact, the indicator GWP-IOBC is required as it declares climate impacts calculated according to the principle of instantanious oxidation. GWP-IOBC is also referred to as GWP-GHG in context to Swedish public procurement legislation.

| GWP-IOBC kg 5.39E+00 2.26E-01 2.30E-04 7.01E-02 6.50E-02 |        | A1-A3       | A4       |          | LZ       | C3       | C4       | D        |
|--|--------|-------------|----------|----------|----------|----------|----------|----------|
| GWP-IOBC Kg 5.59E+00 2.20E-01 2.50E-04 7.01E-02 0.50E-02 | OBC kg | 5.39E+00 2. | 2.26E-01 | 2.30E-04 | 7.01E-02 | 6.50E-02 | 9.13E-04 | 1.42E+00 |

GWP-IOBC Global warming potential calculated according to the principle of instantaneous oxidation.

# Hazardous substances

The declaration is based upon reference to threshold values and/or test results and/or material safety data sheets provided to EPD verifiers. Documentation available upon request to EPD owner.

□ The product contains no substances given by the REACH Candidate list.

# Carbon footprint

While a carbon footprint analysis has not been conducted for the product separately, the results section does include an evaluation of Global Warming Potential (GWP) with such an analysis. The GWP total results presented in this EPD document represents the carbon footprint of the product studied.
