Product

Product description:

PARAFON products are sound absorbing tiles and panels for suspended ceilings and free hanging applications. PARAFON Decibel products are also for sound insulation. The products core material are non combustible stone wool and facing material are pre painted glass fibre tissue. PARAFON products are intended for use indoor and are certified according to EN 13964 for Suspended Ceilings.

Product specification:

PARAFON product covered in this EPD are product for both sound reduction and sound absorption. Products core material is 120 kg/m³ stone wool. Back side is Aluminium foil. Decibel Light is the core products and visible glass fibre tissue differs between 50-190 g/m². The values declared in the EPD are based on product with thickest glass fibre facing. The product thickness is 40 mm.

Market:

Main market areas are the Nordic countries. The scenarious beyond cradle-to-gate are based on Norwegian market.

Product content: (Worst Case Product)

Weight: 1,74kg Size: 600x600x40 mm

For more information; see Bibliography, page 7

Materials	kg	%	
Mineral wool	1.60	92%	
Facings	0.07	4%	
Aluminium foil	0.03	2%	
Binder, coatings, dustbinding	0.04	2%	
Total product	1.74	100%	
Packaging	0,04 kg		
Total: Product+Packaging	1,78 kg		

Reference service life, product:

The reference service lifetime of Parafon Acoustic Ceiling Tiles is 50 years.

Reference service life, building:

The reference service lifetime of 50 years has been assumed for the building in all calculations.

Technical data

Sound Reducing Products	Edge	Thickness (mm)
Parafon Decibel Light Exclusive	Α	40
Parafon Decibel Light Classic	Α	40
Parafon Decibel Light Nordic	Α	40
Parafon Decibel Light Black	Α	40
Parafon Decibel Light Colortone	Α	40
Parafon Decibel Barrier	Α	40

LCA: Calculation rules

Declared unit:

1 m² of installed ceiling tile (thickness: 40 mm, weight per 1 m²: 4,8 kg)

System boundary:

Table below identifies the modules included in this study: The production stage (module A1-A3) covers the following steps:

- · Raw materials production (e.g. diabase, dolomite)
- Binder components production (e.g. resin)
- Transports of raw materials and pre-products to manufacturing plant
- Product manufacturing (power, thermal energy, auxiliaries, emissions)
- · Production of packaging materials

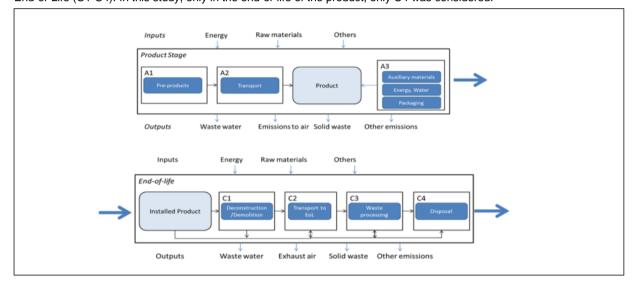

• Waste management, water treatment, end-oflife of residues

With the exception of Modules A1 to A3 (describing the manufacturing of stone wool) all other modules are calculated on the basis of assumptions or scenarios.

The following scenarios were considered in this study:

• module C4 (landfill).

Figure 1. Schematic representation of LCA system boundaries for the production module (A1-A3) and the End-of-Life (C1-C4). In this study, only in the end-of-life of the product, only C4 was considered.

Data quality:

The stone wool production data is site specific from PAROC plants Hässleholm and Hällekis in Sweden. The acoustics ceiling tiles are made of refined stone wool at PARAFON plant in Skövde, Sweden. The inventory for the stone wool manufacturing at Hällekis and Hässleholm, and the ceiling plant in Skövde, covers the year 2015 and is representative for the current manufacturing.

For life cycle modeling the GaBi ts Software System for Life Cycle Assessment, developed by thinkstep AG, is used (/GaBi ts 2016/). All relevant background datasets are taken from the GaBi ts software database. To ensure comparability of results in the LCA, the basic data of GaBi database were used for energy, transportation and auxiliary materials. The datasets are complete and conform to the system boundaries and the criteria for the exclusion of inputs and

Background data refer to the years 2012 till 2015 (/GaBi ts 2016/) with a country specific scope as far as available, e.g. for raw material extraction and production, transportation, fuels and energy supply.

All relevant processes (foreground and background) have been considered when modelling stone wool production. The process data and the used background data are consistent. The data quality can be qualified as good.

Cut-off criteria:

All major raw materials and all the essential energy is included. The production process for raw materials and energy flows that are included with very small amounts (<1%) are not included. This cut-off rule does not apply for hazardous materials and substances.

Allocation:

The allocation is made in accordance with the provisions of EN 15804.

Incoming energy and water and waste production inhouse is allocated equally among all products through mass allocation.

Effects of primary production of recycled materials allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

End of Life (C2, C3, C4)

	Unit	Value
Hazardous waste disposed	kg	0
Collected as mixed construction waste	kg	0
Reuse	kg	0
Recycling	kg	0
Energy recovery	kg	0
To landfill	kg	1

Paroc maintains and offers its customers a used product take-back system called "Paroc Re-Wool" to enable the recyling of old stone wool/acoustic boards.

As module A5 is not declared (including product installation and packaging disposal) and from module C4 (product disposal on landfill) no potential benefits arise module D is not declared.

LCA: Results

Life Cycle Impact Assessment results represent the environmental impacts for the life cycle of Parafon Acoustic Board from cradle to gate - with options.

	list. The product is classified as hazardous waste (Avfallsforskiften, Annex III), see table.	
	The product contains substances given by the REACH Candidate list or the Norwegian	
	priority list that are less than 0,1 % by weight.	
П	The product contain dangerous substances, more then 0.1% by weight, given by	

The product contain dangerous substances, more then 0,1% by weight, given by the REACH Candidate List or the Norwegian Priority list, see table.

The product contains no substances given by the REACH Candidate list or the Norwegian priority list. The product is classified as hazardous waste (Avfallsforskiften, Annex III), see table.

Dangerous substances

None of the following substances have been added to the product: Substances on the REACH Candidate list of substances of very high concern or substances on the Norwegian Priority list as of 03.09.2015 or substances that lead to the product being classified as hazardous waste. The chemical content of the product complies with regulatory levels as given in the Norwegian Product Regulations.

Transport

Transport from production site to central warehouse in Norway is: 245 km

Indoor environment

The product meets the requirements for low emissions (M1) according to EN 15251: 2007 Appendix E. PAROC stone wool products fulfil the most stringent requirement (M1) in the Finnish voluntary system for building material emissions developed by the Finnish Society of Indoor Air Quality and Climate in Finland. Our stone wool products are recognized as low emitting products, for which they have been tested since 1995. PAROC low emitting products are recognized by the M1 label.

Carbon footprint

Carbon footprint has not been worked out for the product.

^{****} Transport from production site to central warehouse in Norway
